

Abstract of the disclosure.

5 A mixer apparatus is disclosed for mixing livestock feed and the like. The apparatus includes
a container for the reception therein of the feed. The container includes a housing and a wall
extending away from the housing, the wall defining an opening disposed remote from the housing
for the reception therethrough of the feed. The arrangement is such that the housing and the wall
define therebetween an enclosure for the feed received through the opening. An auger is disposed
10 within the enclosure, the auger having an axis of rotation which extends through the housing. The
auger includes a core and flighting connected to the core so that when the auger rotates, feed
disposed within the enclosure is mixed. The flighting includes a first portion and a second portion
staggered relative to the first portion such that movement of the feed between the first and second
portions is interrupted.
